

Rainbow Concrete Improving Air Quality

Rainbow Concrete Industries has recently signed an agreement with Tadger Group International to assist them in improving the air quality of Sudbury, North Bay, Parry Sound and throughout the North where Rainbow operates.

Rainbow has continually helped to build many strong structures with their concrete product lines. With this most recent commitment, the strength in community leadership and stewardship of the environment makes them “leaders of the pack”. Rainbow’s commitment to the environment demonstrates Owner, Boris Naneff’s appreciation and dedication to the continual improvement of the Northern Ontario area.

The Tadger device significantly reduces airborne toxic emissions such as Carbon Monoxide, NOx and Carbon Dioxide from any diesel or gas combustion engine. Reductions of 50% are not uncommon to this product as verified by independent laboratory testing. In fact, the Rainbow test produced a reduction of 89.8% in opacity (soot) as verified by Ontario Drive Clean. Company President Mr. John Mogford states “ It is the mission of Tadger to significantly reduce airborne toxic emissions from combustion engines throughout the world.” Tadger’s are now available in Greece, China, the United States and a number of African countries. This Canadian owned and operated company manufactures in Canada and leads the world in innovative technology in the field of emission reductions at low cost.

The lifespan of the Tadger is infinite as it contains no moving parts, needs no maintenance and can be easily transferred from an old engine to a new engine, thereby eliminating the need to purchase more than one for any engine. Significant improvements in mileage are also noted when the Tadger is in operation. Some fleets are finding savings of between 4 - 8% in annual fuel expenses.

With this product installed on the Rainbow fleet, Northern Ontario will benefit from cleaner air for your children and ours. If you wish further information regarding this device, please contact Mr. John Mogford at 905-308-0331 and he would be pleased to work with your company to better your environment.
