

The TADGER Group

E-mail: support@tadgergroup.com Web site: www.tadgergroup.com

Name: Cindy Mogford

Make/Model of Vehicle: 1986 Chevrolet Caprice

Type of unit used: Gas

Testimony:

My Caprice has a 4.3L engine with fuel injection. The engine currently has 158,000 kms.

I purchased the Tadger for the sole purpose of passing the mandatory emission testing.

Before installing the Tadger I had my emissions tested at a Drive Clean Facility. My THC tested at 130 ppm, my CO% at 0.26 and my NO ppm was 2014. For this year, make and model the only item I passed was the CO%.

After installing the Tadger I had my emissions re-tested at the same Drive Clean Facility. My THC tested at 63 ppm, my CO% at 0.53 and my NO ppm was 1667. I had now passed the THC with a 51.5 % reduction and had lowered my NO ppm by 17.2%

The clean burn effect had not been fully realized, as these two emission tests were taken only 17 days apart. I know that if I had kept my vehicle and had it tested after 30-60 days of use with the Tadger that the results would have been even more favorable.

I believe that this product is a must for anyone looking to reduce emissions without the expensive costs of trying to treat the exhaust after the combustion process.
