Name: Ron Chorniuk

Make/Model of Vehicle: Cat 3460B engine

Type of unit used: Diesel

Testimony:

Hi,

I'm sending this letter because I'm excited about a product that should have been exposed to the trucking industry a long time ago.

I am referring to the TADGER product.

I've installed the TADGER on my Cat 3406B engine, which has clocked about 1.9 million kilometers without any major engine work.

The workload of this engine is always consistent, and the truck maintains the same run to Northern Ontario. It averages a pull of approximately 128,000 pounds.

With this type of load the engine averaged approximately 4.6mi/gal.

After installing the TADGER (which only took about 1/2 hour in labour), the driver noticed wonderful results and was very excited about them.

The driver noticed that on the return trip the engine had more power which meant less shifting gears on hills, the engine ran smoothly and there was less smoke on the exhaust on take off and was very clear when cruising.

The biggest factor was the improvement in the mileage. This engine performed an amazing average of 6.8mi/gal. We double-checked these results because this was something that this engine has never done.

We are very impressed with the TADGER product. Nowadays the trucking industry needs products like this especially if you want to cut your fuel expenses.

I think this TADGER product should be installed in every truck.

I am now installing the gas TADGER on my car and am looking forward to big results.
