

CUMMINS ISM

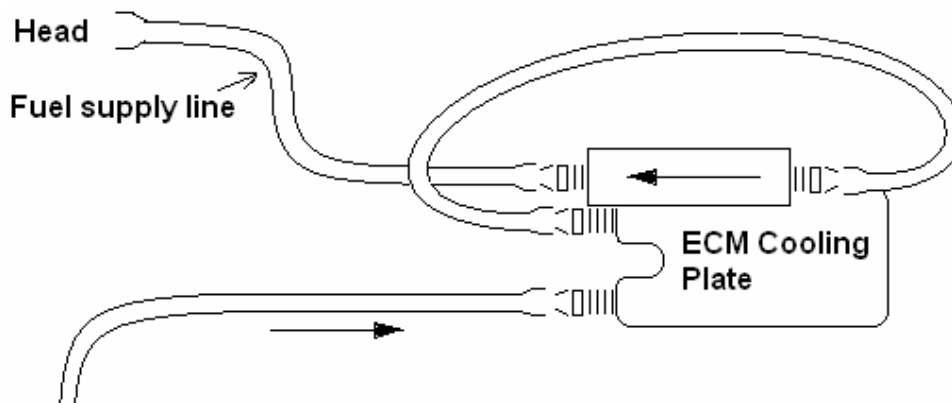

ORIGINAL ENGINE FUEL LINE SETUP

TADGER KIT

INSTALLATION

1. The actual setup may be inverted left to right, ie, with ECM on left and fuel supply line to right of ECM. There are 2 lines connected to head. The right one is fuel supply line.
2. Disconnect fuel supply line at ECM cooling plate, and raise it up above ECM.
3. Connect head end of Tadger kit to fuel supply line.
4. Connect tail end of Tadger kit to fitting on ECM cooling plate.
5. Tighten all connections.
6. Tie off Tadger kit securely with ties to minimize movement. It does not require a solid mounting bracket.
7. If metal on metal, wrap Tadger kit with loom to avoid wear and damage.
8. If location described is not accessible, disconnect fuel supply line at head instead of at ECM cooling plate. Connect hose supplied to head of kit, and install.
