Subject: Gasoline Mileage

Good Morning Bill:

We met recently in London where we exchanged the Tadger intended for an '04 Ford Freestar.

I have had it installed with very good results so far. My base fuel consumption via the Ford computer system was 13.2 litres/100 km. After about 1500 km in 4 weeks the consumption is 11.8 litres/100 km or an improvement of 1.4 litres/100km or 10.6% which is a little better than your forecast. This is on a mix of both urban and highway usage.

I am quite pleased and am recommending it to all.

Dave
