

December 19th 2005

To whom it may concern.

Over the last 18 months I have had a chance to work with the Tadger Group and run a number of tests with their product installed on fleet vehicles as well as individual gas and diesel vehicles.

The principle behind their product is that it creates a controlled turbulence in the fuel, which breaks the molecular bonds, creating smaller sizes droplets, which allows more fuel molecules to bond with oxygen during the combustion process.

The result is

- A cleaner burning vehicle*
- Reduction in Emissions of 7 – 15 %*
- Increase in fuel mileage of greater then 3 %*
- Reduction of Oil consumption*
- Better overall performance and driveability*

Since we are convinced that the TADGER unit really does perform, we have decided to make it a priority to pass this information and knowledge along to our fleet managers and individual customers.

Thank you for your time and I will be more then happy to answer any questions you may have or run specific tests with your vehicles at our new location.
