TADGER LAUNCHED IN NASSAU

Ottawa/Gatineau — January 9, 2007 - The Tadger was officially launched in Nassau, Bahamas with the very first Tadger being installed on December 6th, 2006. The launch of the product in Nassau that week also included a formal presentation of the Tadger's emission and fuel saving benefits to the Ministry of the Environment, the Bahamas Environment, Science and Technology (BEST) Commission and Bahamas Waste, whose primary role is to advise The Bahamas Government on environmental matters. The product was received favorably by all representatives from these groups.

The official launch meeting was lead by EnviroTek's Gord Bretsen, Donna Thomas and Dennis Dames (Nassau Account Representative). Reducing emissions in marine and motor vehicles has been identified as a key issue for Bahamians and government bodies in Nassau. The Tadger will work toward helping Bahamians meet their Kyoto Accord criteria and will also save many locals money on their extremely high imported fuel costs.

The TADGER is a patented device that is attached to the fuel line of any diesel or gas engine to swirl the fuel. In setting up a turbulation in the fuel, it allows it to burn more efficiently and when it burns more efficiently, it produces fewer emissions and uses less fuel.

There are many benefits to using the TADGER: reduced emissions, longer oil life, increased horsepower, more mileage, reduction of soot, prevention of carbon build-up, reduction of black smoke, prolonged engine life, low investment cost and fast return on investment, a healthier environment, no maintenance, and for cities and companies, improved public perception.

The Tadger is distributed exclusively in Canada by EnviroTek Associates, an Ottawa/Gatineau company with agents and distributors in all provinces in Canada, including 11 countries.
